Hi-

This error looks to be caused by zero bytes being sent across the wire, = which is unexpected and leads to the EOFException to be thrown and then = logged at a WARN level on the broker-side.=20

Does your broker have a load balancer, health check or security scanner = running against the ActiveMQ broker port? These tools would make a = connection and not send any data across, which could lead to this = scenario.

Thanks,

Matt Pavlovich

X-Mailer: Apple Mail (2.3818.100.11.1.3)

Additional info=E2=80=94 there is a new configuration flag =  
displayStackTrace (default: false) that will suppresses the stack trace =  
in the log that was introduced before your reported version of v5.18.3.=20=

Check your configuration to be sure you do not have this flag enabled on =  
your transportConnector(s) in your broker configuration file.

If that option is not present, please share a redacted version of your =  
configuration file to this email thread.

Thanks,

Matt Pavlovich=20

I am trying to setup my mail servers correctly, pretty much trial and error method at this point. If you have any helpful information to put me on the right path, I would appreciate it

Thank you On Monday, October 21, 2024 at 11:41:08 AM EDT, Matt Pavlovich <mattrpav@apache.org> wrote: =20

=20

Additional info=E2=80=94 there is a new configuration flag displayStacktrace (default: false) that will suppresses the stack trace in the log that was introduced before your reported version of v5.18.3.=20

Check your configuration to be sure you do not have this flag enabled on your transportConnector(s) in your broker configuration file.

If that option is not present, please share a redacted version of your configuration file to this email thread.

Thanks,

Matt Pavlovich=20

**./5F713FE4-22A1-4E7D-B7FA-CFB0E970AF39@apache.org.mbx.txt**  
**Tue Nov 12 15:15:06 2024 10**

Content-Type: text/plain; charset="UTF-8"

We are running an application using ActiveMQ (currently, version 5.18.3)  
with multiple queues and listeners since several years.  
Has worked fine, so far --- only, in the last week  
we are sometimes seeing Warnings like this in the log-files:

```
2024-10-18 14:23:07,844 [ActiveMQ Transport:
tcp:///127.0.0.1:61616@44966][FailoverTransport:283]
WARN  org.apache.activemq.transport.failover.FailoverTransport - Transport
(tcp:///127.0.0.1:61616) failed, not attempting to automatically reconnect
java.io.EOFException: null
    at
java.base/java.io.DataInputStream.readFully(DataInputStream.java:210)
    at
java.base/java.io.DataInputStream.readInt(DataInputStream.java:385)
    at
org.apache.activemq.openwire.OpenWireFormat.unmarshal(OpenWireFormat.java:280)
    at
org.apache.activemq.transport.tcp.TcpTransport.readCommand(TcpTransport.java:240)
    at
org.apache.activemq.transport.tcp.TcpTransport.doRun(TcpTransport.java:232)
    at
org.apache.activemq.transport.tcp.TcpTransport.run(TcpTransport.java:215)
    at java.base/java.lang.Thread.run(Thread.java:1583)
```

Everythng still seems to work fine without issues.  
I'm just a bit concerned what is causing these warnings?

Anyone can explain what's going on?
