I have spoken to hawtIO dev and he pointed me at
https://developer.mozilla.org/en-US/docs/Web/Security/Secure_Contexts

So I am guessing the URL you are using is causing this to happen, saying
that localhost/127.0.0.1 should work, anything else you need to configure
https. Maybe you are using a different hostname or localhost isnt mapped
correctly?

I haven't seen that before, can you supply your connection config for jolokia. Also what version of Artemis are you using?

Hello,

I'm trying the new Artemis Console.
Installing it with jetty-home-12.0.14 and apache-artemis-console-1.0.0 was =
fine. I followed the details from [https://activemq.apache.org/components/ar=
temis-console/documentation/](https://activemq.apache.org/components/artemis-console/documentation/)
I only needed to tell jetty to use port 8162, as 8080 and 8161 were already=
in use.
The connection to the broker could be added in the gui.
When the connection is used with a wrong username/password, the error messa=
ge "Incorrect username or password" appears as expected.

But with the right username/password, nothing visibly happens, and the foll=
owing error appears in the webbrowser console.

Uncaught (in promise) TypeError: window.crypto.subtle is undefined

Ep crypto.ts:6

b d0339a10.chunk.js:1.238

This happens for Firefox and Edge to rule out specific browser behavior.

Does this look familiar to anyone? Any hints?

thx!
Erwin
